

New Classrooms Innovation Partners at a Glance

The challenge

2/3

of kids leave 8th grade with gaps in algebra

Off-track students have only a **20%** chance of catching up

1/3

of students graduate high school ready for college

At a glance :

New Classrooms Innovation Partners is driven by the belief that today's model for crowded and understaffed K-12 instruction cannot meet student's individual needs. To tackle this issue, New Classrooms Innovation Partners is crafting and implementing new methods to meet students where they are with personalized content and instruction to each student, each day. The organization is currently focused on revamping middle school math with the Teach To One Program. Teach To One operates through a daily assessment and scheduling algorithm that sets up teachers to support students in the most impactful way possible. Today, New Classrooms serves nearly 13,000 students at 40 schools in 12 different regions across the US.

Key programs:

Personalized Education

Teach to One meets students where they are and provides a personalized pathway for each student to learn. Students learn at the rate that is best suited to them and through the methods that best match their individual ways of learning. Each day, students are assigned a unique schedule that moves them through a series of stations, each set up with one of Teach to One's nine learning modalities.

Reimagined Classroom

In the Teach to One program, New Classrooms Innovation Partners creates large open learning centers that are designed to accommodate multiple approaches to learning. In this new classroom format, several teachers oversee the space and work together in supporting their students.
